INSTRUCTIONS for finding the time of the Sun's Rising or setting by the above TABLE.

Under the Degree of Latitude, or the nearest to it, of the place required, taken from the preceding Table, and opposite to the day of the Month on the left hand side of the Table, the time of the Suns rising will be found; and opposite to that, on the left hand side, is the time of his Setting.

EXAMPLE: AT what time does the Sun Rise and Set the 1st of Feb. 1790 under the Parallel of Latitude of Calcutta?

Ans. Rises at 29 Minutes past six in the Morning, and sets 31 Minutes past five in the Afternoon.

On the 9th of Nov. the Sun will be found to rise and set at the same time, his place in the Ecliptic on the 1st of Feb. and 9th Nov. being equally distant from the Equinoctial Line, Viz. On the former from the first point of Aries, and the latter from that of Libra.

N. B. The Sun should not be considered as risen or set, until his lower limb is in contact with the Horizon; his Refraction in Altitude being at that time 30' 30", nearly equal to his Diameter.
